Clustering WSO2 Products

You can install multiple instances of WSO2 products in a cluster to ensure that if one instance becomes unavailable or is experiencing high traffic, another instance will seamlessly handle the requests. This guide describes clustering and how to implement it with WSO2 products in the following sections:

- Overview
- Creating a Cluster
- Configuring Deployment Synchronizer
- Clustering API Manager
- Clustering Identity Server
- Clustering Application Server
- Clustering Message Broker
- Clustering User Engagement Server
